Assignment 1 - Linear Programming - Section A

Maxwell Bo Chantel Morris

March 15, 2018

Sets

C cities
Q quarters

Data

i_c current number of barrels in city $c \in C$ [1]
d_{cq} predicted demand of barrels in $c \in C$ for quarter $q \in Q$
c_q predicted cost of dollars per barrel for quarter $q \in Q$

Variables

x_{cq} number of barrels to deliver to city $c \in C$ in quarter $q \in Q$
s_{cq} number of barrels to store in city $c \in C$ at the end of quarter $q \in Q$

Objective

$$\min \sum_{c \in C} \sum_{q \in Q} 25 s_{cq} + c_q x_{cq}$$

Constraints

$$\sum_{c \in C} x_{cq} \leq 10000 \quad \forall q \in Q$$

$$i_c + x_{cf} - d_{cf} = s_{cf} \quad \forall c \in C$$

$$s_{c(q-1)} + x_{cq} - d_{cq} = s_{cq} \quad \forall c \in C,\ \forall q \in Q \setminus \{f\}$$

$$x_{cq} \geq 0 \quad \forall c \in C,\ \forall q \in Q$$

and optionally

$$S_{cl} \geq 3000 \quad \forall c \in C$$

where f is the first quarter, and l is the last quarter.

[1] i for initial
